Vietnamese (Native), English (IELTS 8.0), German (B1.1)

EDUCATIONS

Vietnamese-German University

B.S. in Computer Science & Engineering

Ho Chi Minh, Vietnam

Expected Graduation, 2027

- **Concentrations:** Software Engineering
- **GPA:** 3.68/4.00, DAAD Study & Stay Scholarship, DAAD Additional Sur-place Scholarship, VGU 100% Merit Scholarship
- **Related Coursework:** Data Structures & Algorithms, Software Engineering, Object-Oriented Programming, Databases, Computer Networks, Operating Systems, C/C++ Programming, Computer Architecture, Algebra, Calculus, Statistics

Tran Dai Nghia High School for the Gifted

Math Specialized

Ho Chi Minh, Vietnam

2020-2023

- **Concentrations:** Mathematics
- **GPA:** 3.72/4.00, Third Prize in City Math Competition

PROJECTS

Kimono Rental Webpage

Team Member

Ho Chi Minh, Vietnam

In progress

- Architected a serverless booking system using React and Google Apps Script, eliminating traditional backend costs while automating real-time data synchronization to Google Sheets
- Boosted user conversion by engineering a dynamic price estimation engine using React Hooks and Router v7 to persist complex guest configurations across sessions
- Enhanced brand engagement by developing a high-performance "Lookbook" featuring physics-based animations via Framer Motion and react-pageflip to improve UI interactivity

Tripify Webapp

Team Member

Ho Chi Minh, Vietnam

In progress

- Engineered an AI travel engine using Gemini 1.5 Flash and Jackson parsing to eliminate Markdown overhead, delivering high-fidelity, structured JSON outputs for complex itineraries.
- Designed a modular Spring Boot architecture via the Strategy pattern, decoupling Geocoding and Routing services to ensure 100% system extensibility and API flexibility.
- Architected a multi-tiered backend using DTOs and Jakarta Validation, achieving strict separation of database and API layers to optimize data integrity and business logic scalability.

Traffic Simulator

Team Lead

Frankfurt, Germany

Oct 2025 – Jan 2026

- Led a 5-person team to build a modular traffic platform using MVC, reducing feature delivery time by 30% through decoupled architectural boundaries.
- Engineered a Java 17 traffic engine with 0.1s sync via TraCI; implemented a Producer-Consumer pattern to eliminate UI latency during high-load stress tests.
- Optimized visualization performance by developing an automated telemetry pipeline and image caching layer, slashing memory overhead and accelerating rendering speeds.

SKILLS

Programming: Java, Python, JavaScript, HTML/CSS, SQL, Node.js, React.js, R, C++, C,

Coding Tools: IntelliJ, PyCharm, Eclipse, Google Colab, Git, Github, Visual Studio Code, Spring Boot, Agile, Tailwind, Docker

AI Tools: Gemini Gens, Gemini CLI, Google Antigravity, Google Stitch, Google Whisk, Google Flow
